

Dealzer Soil Grow Box Instructions

The soil grow box is perfect for beginners because it is so easy to use. Here are some simple instructions.

1. Add soil to pot. Put pot and saucer in grow box.
2. Put seed into the pot 1% below the surface. Add water. Don't overwater though because it can hurt your plant. After 3 – 7 days, the seed should germinate and a stem should pop out of the top. If it hasn't germinated by day 7, it means the seed is not viable and you will have to use another seed.
3. After Germination, you will enter the vegetative stage. Plug all 3 lights into the green side of the powerstrip/timer. The timer has an arrow on the clock. Put the arrow on the time that it is right now in your State. There are tiny buttons all around the clock that go up and down. Put 75% of them down and 25% of them up. This will leave the lights on 75% of the time and off 25% of the time to simulate sunlight. If you are using autoflower seeds, you can leave the timer like this the entire time. If you are using feminized seeds, you will have to change the timer to 12 hours on and 12 hours off at week 5. If you need visual assistance on how to use a mechanical timer, check this video here:

4. Water plants every 2-3 days but don't soak them or else the leaves might shrivel.
5. Try to never open the door when it is dark inside because darkness means the plants are sleeping.

Pro Tips:

1. Play classical, jazz or instrumental music at 432 hz to greatly improve plant growth.
2. Use Co2 to increase plant growth.
3. Use electro-stakes to increase plant growth: <https://dealzer.com/electro-stake-electroculture-yield-growth-booster-for-large-rapid-plant-growth-5-pack/>
